Product Improvement

Product: Silver tungstate/Magnesium oxide reagent Part numbers affected: B1038, B1036, B1145, X2000

As part of our policy of on-going product improvement users will notice a change in the appearance of the silver tungstate/magnesium oxide reagent.

The active ingredients and function remain the same but the new product has been shown to improve baseline stability in hydrogen analysis and reduce H₂O peak tailing as observed in certain applications.

In practice the new product is used as a direct substitution for the old.
